

# State of the Environment Snapshot

A State of the Environment (SoE) Report is an important management tool which aims to provide the community and Local Council with information on the condition of the environment in the local area to assist in decision-making.

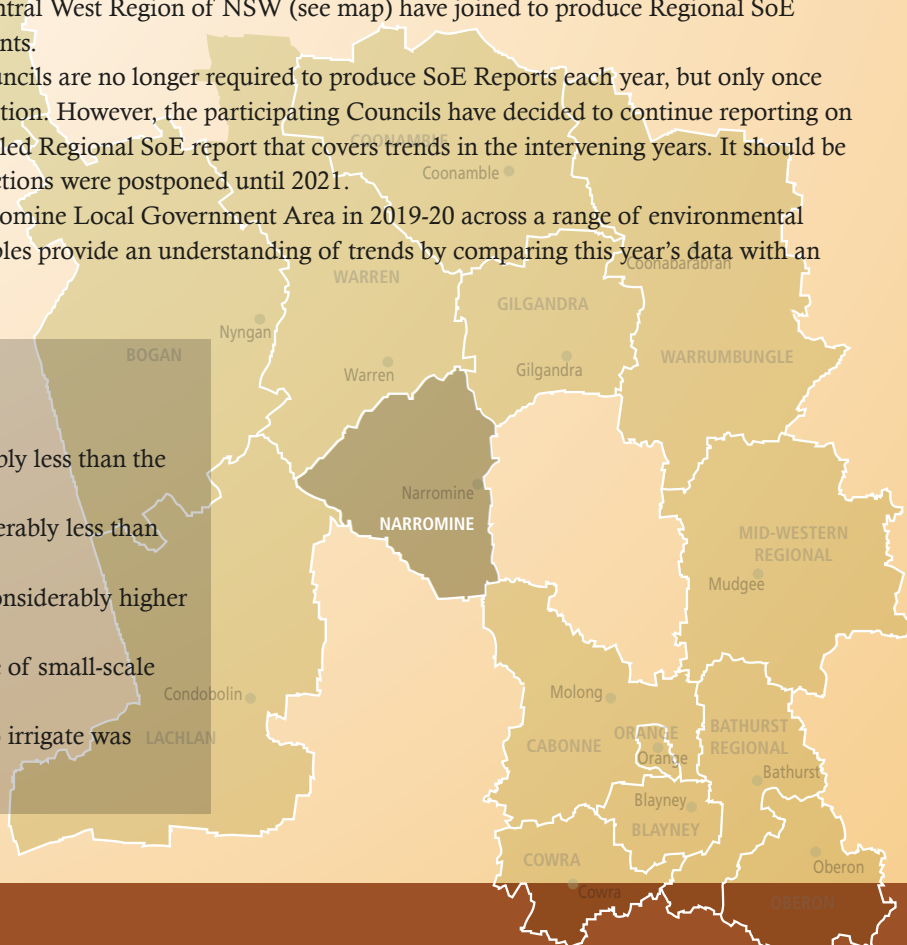

Since 2007, the Councils of the Greater Central West Region of NSW (see map) have joined to produce Regional SoE Reports as part of Council reporting requirements.

Changes to NSW legislation mean that Councils are no longer required to produce SoE Reports each year, but only once every four years, in the year of the Council election. However, the participating Councils have decided to continue reporting on an annual basis so that they can provide a detailed Regional SoE report that covers trends in the intervening years. It should be noted that the planned 2020 NSW Council elections were postponed until 2021.

This is a brief snapshot of data for the Narromine Local Government Area in 2019-20 across a range of environmental indicators as shown in the tables below. The tables provide an understanding of trends by comparing this year's data with an average of previous years.

## 2019-20 Highlights

- ↑ Town water consumption was considerably less than the three previous years.
- ↑ Council's use of office paper was considerably less than the three previous years.
- ↓ Council's electricity consumption was considerably higher than the three previous years.
- ↑ There was a significant rise in the uptake of small-scale renewable energy.
- ↑ The amount of water used by Council to irrigate was lower than the three previous years.

## CASE STUDY: Narromine Wetlands Extension Project (Narromine LGA)

The Narromine Common Wetland Reserve) is a large open space on the outskirts of Narromine, approximately 28 hectares in size. This area of land is owned by and is under the management of Narromine Shire Council. The reserve features three large ponds complemented by areas of extensively revegetated Eucalypt grassland and open recreational space.

The ponds are utilised in several ways: they are primarily designed to treat stormwater from the southern parts of Narromine, however the wetlands and regenerated

areas also provide vital habitat to native and exotic flora and fauna as well as an important community amenity. These amenity features include walking tracks, car parks and picnic areas.

A number of meandering pathways make their way through the Eucalypt grasslands and wetland complex, crossing two pedestrian bridges.

The design plans for the wetlands include interconnection by channels to each new pond.

Each new pond has deep basins or dwells that provide thermal temperature difference and diversify the habitat values of the wetlands, several islands of trees and low indigenous vegetation will provide habitat regardless of water levels. Gravel paths will surround each of the three new ponds with several extensive feature mounds created from soil excavated from the three ponds.

These will be developed as viewing mounds to incorporate path interconnections, seating, and provision of shade and shelter structures. Bus parking has been provided to the existing picnic facilities to the northern corner of the reserve.

The project will include the installation of new fencing to eliminate the potential for feral animal incursions, and a new irrigation system to irrigate the new vegetative areas.
